Hillside road, Lambeth, near Waterloo Bridge.

THE GENERAL WOOD CUTTING MACHINE

THE COMPANY continue to receive the most satisfactory answers from all who have given their improved machinery a trial. The following are some of the most important advantages of this machine, &c. by which accuracy, dispatch, and economy of material are so certainly obtained. In shooting, or grooving and tonguing a piece of board, although narrow, the machine follows the line of the grain, and the grain of the board, and the edge of the board, is peculiarly well for deep cutting, the board comes out with a perfect surface, thus obviating the necessity of re-finishing its thickness to plane out the hollows. The Company being neither a manufacturer nor a dealer in machinery, but a firm of engineers, that of saving and planning, and depending solely on the public for a moderate interest on their capital, are determined, by an unusual degree of attention to the interests of their customers, but as regards the business of manufacturing and business arrangements, to merit a comparison with the best of the kind.

DRUCE, No. 3 WHARF, late Paradise-wharf, Chelsea.

TENT GALVANIZED IRON ROOFING WORKS, South
ward-binder and the District, Southward. At the same Work
the Public are secure in having the superior make, and by the
Patent process of Galvanizing Iron as first introduced into this
Country, with many improvements in its application to Roof
ing, Builders, etc. Every description of Building, Railroad, and
Iron and Smith's work Manufactured of the best quality. Iron
Fence and Hurdles as usual.—The Trade Supplied.

By Her Majesty's Royal

MOREWOOD and ROGER'S PATENT GALVANIZED TINNED METAL.—The article was first sold under the name of Galvanized Tin Plates, but the London Convention has decided upon the name of Tinned Metal. The Convention has also decided upon the character of their metal has thereby sustained injury, as persons of genuine tin name so distinctive as to prevent such confusion. It is therefore respectfully requested that purchasers of MOREWOOD and ROGER'S PATENT GALVANIZED TINNED METAL should be careful to distinguish between the two metals. It may be well to inform them, that tinned-iron has a plain, fine-grained appearance.

crystalline surface.

MOREWOOD AND RUMFORD'S PATENT GALVANIZED TIN-NEED IRON. Manufactured by the Admiralty and the Honorable Board of Ordnance, have extremely used in her Majesty's Dockyards at the Tower, and elsewhere, for every variety of Woodwork and other purposes, where a strong, light, cheap, and durable material is required.

It has been found by experience that this article is beyond comparison superior to zinc-potting, as it does, all the advantages of zinc, with the strength and durability of iron, without any perfect immunity from rust; whilst it is free from the very serious objection which applies to zinc, viz. its contraction and expansion consequent upon every change of temperature, and from which expansion leads to loss of shape.

This material is not likely to be destroyed by fire, as it is the same with lead, which melt and run down, thus freely admitting the fire, and the fire, thereby it is built more securely, and is therefore almost self-protected for all the purposes above named, and most importantly so, when there is the possibility of fire. It is also peculiarly suitable for chimney tops, gutters, apertures, and other leak-proof work, as the strength of the metal, without its liability to corrosion. It is by far the most economical material that can be obtained, in consequence of its strength, as it may be used without linings, and upon the lightest and most economical plan of partitioning, and is equally adapted for short-time, but also to manufactured iron in any form, as bolts, nuts, hinges, nails, &c. &c.

For particulars apply to **S. HOLLAND, 31, Ormeau Street.**

DEANE'S TWO-HOLE BLACK PEN
which are unequalled for their durability and many are adopted by the gentlemen of the Stock Exchange and the principal bankers, merchants, and public companies of the city. London. The pen is made of the finest steel, and is carefully examined and approved by the principal members of the Council, and the renowned the celebrated pen-champ and pen-critic have induced many unacquainted people to put forth imitations of the genuine article, which are equally unknown to the public. The pen is made of the finest steel, and is carefully examined and approved by the principal members of the Council, and the renowned the celebrated pen-champ and pen-critic have induced many unacquainted people to put forth imitations of the genuine article, which are equally unknown to the public. THE Patentee having fixed a great number of his shutters in London, and given universal satisfaction, has confidently recommended them both for security and durability. The edge being sheathed with iron, their construction is so simple that the largest establishment can be opened or closed with the greatest ease and rapidity. The great superiority over other resisting shutters consists in their great strength and stiffness, being without metal hinges, consequently not liable to rust, and being so constructed as to be opened or closed by means of a screw, without the aid of any lever. Persons dissatisfied with the patent raising bar now used for opening shutters can have it removed, and the shutters made to draw up any part of the fronton, with the aluminium frame, without making any alteration in the construction of the shutter itself.

[illegible]

favour of the Patentee in the Court of Chancery, in the action
 brought by order of the Court of Chancery, that said Court has granted
 an injunction restraining the said Defendant from infringing the said
 Patent, and therefore all parties are hereby restrained against in-
 fringing the same.

THE PRICES ARE GREATLY REDUCED, AND BURNING
SHUTTERS AND PATENT PATTERNS BUTTERFLY
CHEAP AS WELL AS THE BEST. They are made with
 convex laths. If required. The worm and wheel motion for raising
 and lowering revolving from shutters (as secured by this Patent)
 is the best in the mode of effecting that object. In large
 shutters it is indispensable.

Some thousands of Burnett and Corp's Shutters have now been
 put up, without a single complaint of their want of strength,
 security, or tightness, and the long experience during which they
 have stood, is a real recommendation. It is useless to make the
 challenge comparison with any others. They will guarantee to
 shutters put up by them to keep in order, and last twice as long
 as with thin convex laths.

Also **THE PATENT REVOLVING WOOD BURNET**
 the Patent for which has expired, at the same price as other
 makers, but greatly superior, being fitted with their patent raising
 gear, and proper metallic hinges, without which no shutter can
 last.

BENNETT AND CORPSE are likewise Patentees and Manufacturers of METALLIC RAIL-BARS, MOULINERS, &c. IRON, BRASS, COPPER, GUN-METAL, FOR SHIP-PURPOSES, WINDOW-GLASS, GLAZES, & WATER-TIGHT JOINTS.
Phosphoric Stiles with Iron Shutter, Patent Water or Zinc Sashes, Plain or Ornamental, hand-made Engraved, Moulded Metal-panel Plates, best Plate Glass, and Internal Brass Fitting—All kinds, superior in quality and workmanship, and lower in price than elsewhere. Orders sent by Post to T. Y. C. and Country.

Metal Drawing and Stamping for the Trade.

Office at No. 27, Lombard-street, London; Works at Liphook, Kent.

A General Meeting will be held on Thursday, 25th February, at the Theatre of the Marylebone Literary and Scientific Institute, Edgware-street, Portman-square, to enrol Members and receive donations.

NOTICE:—Attendance will be given three hours previous to Meeting to answer inquiries, &c. Extended advantages Building Societies. Immediate Advances made to Members eligible Property they may be desirous of purchasing, to the full extent of its value, including all expenses, &c.—Vide Rules.
